

THE ALTERNATIVE PAIN MANAGEMENT SOLUTION

WITH CLINICALLY-PROVEN RESULTS

Evaluation of effects of consumption of *Play Again* on chronic pain and functionality*

Four-week pilot study, with a one-year open-label extension, gathered data from a patient base of 72 participants regarding pain reduction During consumption of Play Again.

STUDY DESCRIPTION

A randomized, double-blind placebo-controlled study on the effects on human subjects of consumption of a new consumable nutritional product, Play Again.

Primary outcome: Pain relief and increased function

Secondary outcome: Basic evaluation of safety and tolerability

PRELIMINARY CONCLUSIONS

The studies showed that consumption of *Play Again* had the following positive effects:

- Decreased pain during physical activity
- Increased physical energy
- Lowered use of pain medication
- Improved sleep
- Safety measures well within normal parameters

Clinically-Tested, Physician-Approved. *Play Again* was proven safe and effective in a year-long clinical study by an independent research laboratory. Two physician field studies confirmed these results. General practitioners, orthopedic surgeons, sports medicine physicians, physical therapists and athletic trainers alike recommend *Play Again* to their patients.
